O recomendado e php 5.6 conforme anunciado, mas se vc quiser tentar outro php, basta mudar pelo .htaccess. E no Cpanel na opção "Pacotes PEAR PHP" Instala o

Crypt\_Blowfish (1.1.0RC2) ou alguma coisa com MCrypt PHP extension.

Fazer funcionar na Hostgator acrescenta esse código no fim do arquivo .htaccess igual na imagem abaixo

```
<IfModule mod_rewrite.c>
 1
             <IfModule mod_negotiation.c>
    Options -MultiViews
  3
 4
             </IfModule>
 5
 6 7
             RewriteEngine On
             # Redirect Trailing Slashes...
 8
 9
             RewriteRule ^(.*)/$ /$1 [L,R=301]
10
11
             # Handle Front Controller.
            RewriteCond %{REQUEST_FILENAME} !-d
RewriteCond %{REQUEST_FILENAME} !-f
RewriteRule ^ index.php [L]
12
13
14
15
      </IfModule>
16
17
      # php -- BEGIN cPanel-generated handler, do not edit
18
# Ints domain innerits the "PHP" package.

# php -- END cPanel-generated handler, do not edit

kIfModule mime_module>

AddHandler application/x-httpd-ea-php55__lsphp .php .php5 .phtml

kIfModule>
       # This domain inherits the "PHP" package.
```

```
<IfModule mime_module>
  AddHandler application/x-httpd-ea-php55___lsphp .php .php5 .phtml
</lfModule>
```
